

UNIT 02 / 13 • LEARN & TRY

A market notebook

Name: _____ Date: _____

Learn

Read the original passage twice. Read for conditions that affect a comparison. Use words from the passage when a question asks for evidence.

Nikhil's class compared prices at a local market. They wrote the price of the same quantity of tomatoes at three stalls. One seller charged less for very ripe tomatoes. Another offered a lower price only for a large basket. Back in class, the children decided that a fair comparison needed the same quantity and similar quality.

Worked example

A reason explains why something happened. An inference combines a clue in the text with a sensible explanation; it must fit the words on the page.

1. What did the class compare?

2. Why were some tomatoes cheaper?

3. What condition came with another lower price?
