

UNIT 02 / 13 • LEARN & TRY

The reading survey

Name: _____ Date: _____

Learn

Read the original passage twice. Ask who had a chance to contribute information. Use words from the passage when a question asks for evidence.

A class asked pupils which books they read last month. The survey was placed beside the library issue desk. Most respondents named several books. The class first concluded that nearly everyone in school read often. Their librarian pointed out that pupils who rarely visited the library had fewer chances to see the form. The class decided to invite responses in every classroom.

Worked example

A reason explains why something happened. An inference combines a clue in the text with a sensible explanation; it must fit the words on the page.

1. Where was the survey placed?

2. What was the first conclusion?

3. Who may have been missed?
